

The San Joaquin Valley

Interregional Goods Movement Plan

Executive Summary

The San Joaquin Valley (SJV) has always been California's geographic and agricultural production center, and its main source of exports. Now, the SJV is taking on new roles in California's goods movement economy. It is California's fastest-growing region, with a population of over 4 million that is anticipated to grow to more than 6 million people by 2035. It is the still the nation's number one agricultural producer, generating more than \$35 billion every year in nuts, lettuce, tomatoes, wine, and other grains and agricultural products. It also plays a major role in the national and international distribution of processed foods and energy products, and has a burgeoning logistics and distribution industry. In fact, a number of companies have located large regional and national distribution centers in the SJV to take advantage of relatively inexpensive land and low cost labor, good access to the national rail and interstate highway networks, connections to major deepwater ports in Oakland, Los Angeles, and Long Beach, and proximity to major consumer markets in Southern California and the San Francisco Bay Area. As a growing and diversified region, efficient goods movement is important to the long-term success of the SJV economy.

Recognizing the importance of goods movement to the region, the eight San Joaquin Valley Council of Governments and Caltrans commissioned this San Joaquin Valley Interregional Goods Movement Plan. The goods movement plan summarized in this Executive Summary builds upon recent traffic, logistics, and long-term infrastructure improvement planning efforts throughout the study area. Building on these prior efforts and new analysis, the plan developed a comprehensive list of prioritized multimodal projects, strategic programs, and policies that will guide goods movement investments and policy in the region in the future.

While accommodating growth in goods movement demand is important to ensuring the economic health of the SJV region, this growth must be achieved in an environmentally sustainable manner. The plan includes strategies for improving the environmental performance of goods movement in the SJV and mitigating impacts on communities. The plan concludes with a discussion of funding and implementation strategies so the SJV regional transportation agencies can move forward with next steps to realize the vision embodied in this plan.

MADERA CTC

The San Joaquin Valley Interregional Goods Movement Plan

Plan Timeline and Milestones

The San Joaquin Valley Interregional Goods Movement Plan was completed over a 24-month time frame during 2011 to 2013. The work was completed following a nine-step process that was divided into three stages, as shown in the figure below:

- In **Phase I**, the team used available data, previous studies, and stakeholder outreach to establish existing goods movement conditions, the nature of regional freight demand, expected growth, and current operating conditions of the major transport modes.
- **Phase II** concentrated on developing strategies for freight mobility improvements and mitigation of adverse impacts, including an extensive list of priority projects in multiple categories.
- Phase III brings these efforts together in a final report constituting the recommended SJV goods movement
 plan and implementation strategy. The plan identifies funding options and also makes policy recommendations. Many of the funding strategies and policy recommendations necessitate action by other agencies both
 within and outside of the SJV. As such, the plan provides an agenda for advocacy that the SJV COGs can
 pursue over the coming years.

This SJV Inter-Regional Goods Movement Plan is intended to take the next steps to develop and implement the region's freight transportation vision. This effort, more than the prior Valley-wide goods movement planning efforts, is focused on developing actionable project recommendations and implementation plans.

San Joaquin Valley Goods Movement Plan 9 - Task Methodology

Phase I: Assess Conditions

Task 1: Demographics, Economics, and Circulation

Task 2: Importance and Benefits of Freight Movement

Task 3: Stakeholder Outreach

Task 4: Goods Movement Data and Report

Task 5: Assess Growth in Freight Demand, Trends in Logistics Industry, and 2035 System Performance
Task 6: Evaluate Community, Environmental, and Economic Impacts of Freight Movement

Phase II: Strategy Development

Task 7: Identify and Evaluate Strategies for Improvement Freight Mobility

Task 8: Identify Strategies for Mitigating the Effect of Goods Movement on Communities and the Environment

Phase III: Recommendations

Task 9: Develop SJV Interregional Goods Movement Plan Report and Identify Institutional/Funding
Arrangements Needed to Implement the Plan

Methodology to Create a Prioritized Project List

The priority project and strategy list was developed according to four main criteria as established by the project stakeholders:

- 1. The list should offer solutions to the goods movement issues that are facing the SJV, and as established by stake-holders or through technical work completed throughout this SJV Goods Movement Plan.
- 2. The list should be multimodal, and reflect the fact that goods movement in the SJV includes trucks, railcars, airplanes, and port facilities.
- 3. The list should represent the combined vision of the eight SJV counties. It should be geographically diverse, be built through significant stakeholder outreach, and reflect projects of regional significance.
- 4. The list should be prioritized using clearly identifiable information and data, so that the selection process is objective and recognizes the different categories of benefits provided by the regional goods movement system.

The six-step methodology used to create the priority project and strategy list relied on a mixture of quantitative analysis, qualitative assessment, and stakeholder feedback. In some cases, it was not possible to develop quantitative evaluation methodologies and in these cases, qualitative techniques were used during project prioritization.

Step 1: Establish High-Level Goals for Goods Movement in the San Joaquin Valley	Outreach to shippers, carriers, public agencies, environmental groups, ports, and more
Step 2: Develop Performance Measures	Focus on quantitative measures with readily-available data
Step 3: Create Preliminary "Master" Project List	Eight county RTPs, stakeholder interviews, TCIF, new projects
Step 4: Screen the Project List	Created list of regionally important projects (on key goods movement infrastructure, supporting key industries, or those identified by stakeholders)
Step 5: Analyze Project Performance Impacts	Using Valley-Wide Truck Model, Caltrans Cal B-C Model, IMPLAN, other sources
Step 6: Final Prioritization of the Projects/Strategies	Ranked according to performance impacts, High, Medium, and Low. List refined through extensive outreach and coordination with regional stakeholders

The San Joaquin Valley Interregional Goods Movement Plan

Prioritized Project List

In order to address the identified goods movement issues, the SJV Goods Movement study identified 49 priority projects, organized into seven categories:

- 1. Regional North-South Highway Capacity: Conventional capacity increases through widening, interchange improvements, and new construction.
- 2. East-West Connectors: Conventional capacity increases through widening, interchange improvements, and new construction.
- 3. Local "Last Mile" Connectors: Conventional capacity increases through widening, interchange improvements, and new construction.
- 4. Modal Capacity for Expected Flows: Rail and highway capacity increases to accommodate specific expected increases in existing freight flows.
- 5. Contingent Economic Development Opportunities: Rail and air cargo capacity increases or upgrades to support new or hoped-for freight flows.
- Inland Ports: Goods movement and economic development initiatives requiring both capital investment and operating subsidies.
- 7. Strategic Programs: Regional strategies encompassing multiple projects.

Prior	ity Regional Highway Capacity Projects
15a	Widen I-5 from 1 mile north of SR 12 to SJ County Line
15b	Widen I-5 between SR 120 and I-205
15c	Widen I-5 from 4 to 6 lanes from the San Joaquin County Line to Sperry Ave
15d	Widen I-5 between Kings County and Merced County lines
99a	Widen SR 99 French Camp Rd to Mariposa Rd from 6 to 8 lanes, improve interchanges
99b	Widen SR 99 from 6 to 8 lanes in Stanislaus County
99c	Widen SR 99 from 4 to 6 lanes in Merced County
99d	Widen SR 99 from 4 to 6 lanes from Avenue 7 to Avenue 12
99e	Widen SR 99 from 6 to 8 lanes from Central Avenue to Bullard Avenue
99f	Widen SR 99 from 4 to 6 lanes from SR 137 to SR 198
99g	Widen SR 99 from 4 to 6 lanes from Kern Co. Line to Prosperity Avenue
99h	Widen SR 99 from Beardsley Canal to 7th Standard road
106	Widen SR 65 in Tulare County- SR 190 to County Line

Prioritized Project List (continued)

13 North County Corridor New Interregional Expressway from SR 99 to SR 120/108 16 Widen SR 120 between I-5 and SR 99, new interchange at SR 99/SR 120 17 Widen SR 132 connecting SR 99 and I-580 18 SR 152 Bypass around the City of Los Banos 19 Widen SR 152 between SR 99 and U.S. 101 20 Widen SR 180 to 4 Lane Expressway Quality Avenue to Frankwood Avenue 26 Widen SR 12 from I-5 to SR 99 42 Construct New Route: SR 132 West Freeway project from SR 99 to I-580 51 Centennial Corridor SR 58 Upgrade I-5 to SR 99 and east 60 Widen SR 137 between Lindsay and Tulare 63 Widen SR 198 from 2 to 4 lanes from LNAS to I-5 69 Add SR 58 capacity east of Bakersfield (near Sandpatch grade) 105 Widen SR 41 to a 4 lane expressway – King Co. Why is Goods Movement Important in the SJV?

This plan recognizes that the efficient and safe movement of goods is a crucial aspect of daily life for residents and businesses alike in the SJV. For residents, goods movement is essential to deliver food to grocery stores, consumer goods to stores, furniture and goods to offices, and packages to people's homes – even tap water depends on the timely arrival of treatment chemicals.

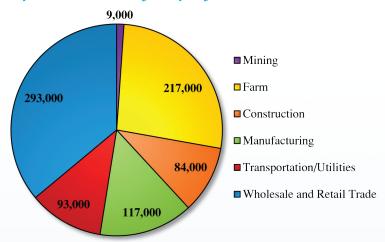

Likewise, goods movement-dependent industries rely heavily and visibly on transportation as a key part of their operations. This group of industries includes agriculture, manufacturing, wholesale (and retail) trade, construction, transportation and warehousing (including utilities), and mining sectors. They may receive daily shipments of raw supplies to support their production process, or send daily deliveries of refined or finished product to market.

Goods movement-dependent industries remain the foundation for many local area economies within the SJV region. In 2010, over 44% of the region's employment (564,000 jobs) was provided by goods movement-dependent industries. This amount is anticipated to growby 2040 it is anticipated that over 813,000 jobs will be provided by industries such as wholesale and retail trade (293,000 jobs), farming (217,000 jobs), manufacturing (117,000 jobs) and transportation and utilities (93,000 jobs).

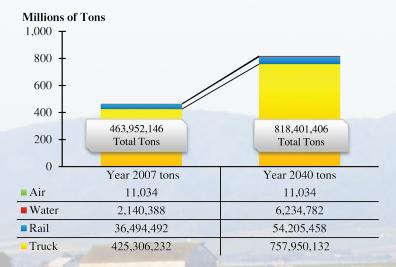

These industries also contribute billions to the region's economy. According to the United States Bureau of Labor Statistics, the Gross Domestic Product (GDP) for goods movement-dependent industries in the eight-county study area in 2010 was about \$56 billion.

Growing industries and population mean that freight demand will grow in the future. In fact, freight volumes moving in the San Joaquin Valley are projected to grow from 500 million tons in 2007 to almost 800 million tons by 2040. Movements will continue to rely heavily on truck- by 2040 roughly 93% of all commodity movements will be carried by truck.

2040 Anticipated SJV Goods Movement Dependent Industry Employment

Source: California Forecast, 2011, Moody's economy.com (for mining employment).

What is "The Goods Movement System" in the San Joaquin Valley?

The SJV is home to a variety of transportation facilities for moving goods ranging from Interstate and state highways, Class I and short line railroad facilities, intermodal terminals, inland ports and waterways, air cargo facilities, and other infrastructure that supports the movement of goods.

The highway and local road system is the primary freight infrastructure for the region, and trucking is the dominant freight mode. Truck movements are centered on the main north-south arteries, including I-5 and SR 99, as well as numerous east-west corridors such as SR 58, SR 120, SR 132, SR 180, I-580 to 205, SR 152, SR 46, and SR 198. In all, there are over 31,420 roadway

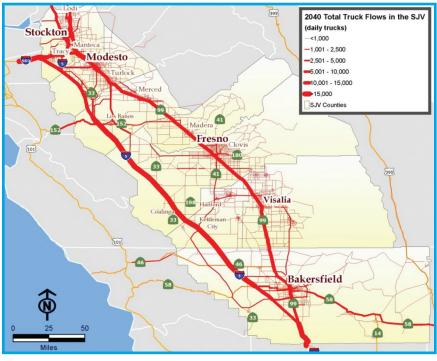

miles in the SJV. Combined, they offer connections between the SJV and California's coastal population centers (major markets for the SJV's food products and distribution centers), as well as providing connections to the rural agricultural production areas.

The SJV is also served by two major **Class I railroads**, BNSF Railway (BNSF) and the Union Pacific Railroad (UP); and **short line and regional railroads**, including Sierra Northern Railway (SERA), California Northern Railroad (CNR), Stockton, Terminal & Eastern (STE), Central California Traction (CCT), Modesto & Empire Traction Company (MET), San Joaquin Valley Railroad Company (SJVR), and the West Isle Line (WFS).

The Ports of Oakland, West Sacramento, Los Angeles, Long Beach, and others are linked to SJV origins and destinations by truck. **The Port of Stockton** is located within the SJV, and is primarily a bulk commodity port. It also has extensive rail trackage operated by the CCT, with connections to UP and BNSF.

The air cargo system in the SJV is comprised of seven airports—all of which offer limited commercial passenger airline and air cargo service: Fresno-Yosemite International, Inyokern Airport, Meadows Field (Bakersfield), Merced Regional Airport, Modesto Municipal Airport, Stockton Metropolitan Airport, and Visalia Municipal Airport.

The technical analysis and stakeholder outreach completed throughout the San Joaquin Valley Interregional Goods Movement Plan revealed that there are numerous challenges facing the safety and efficiency of the region's goods movement system. Many of these challenges can be grouped around six main issues. Some issues and challenges deal with the safety or maintenance of the region's infrastructure, while others describe operational inefficiencies. These issues and challenges helped to guide the creation of performance measures and the project prioritization process that was a central part of this plan.

Source: SJV Truck Model

Issue #1: Increasing population and industry activity means trucks and cars vying for limited roadways access, leading to congestion and bottlenecks throughout the region. By 2040, many of the region's main truck routes are projected to carry demand that exceeds their capacity – and to operate in a congested manner, despite programmed improvements. The region has several critical goods movement corridors (most notably I-5 and SR-99) that carry the highest volumes of trucks within the San Joaquin Valley. However, there are also many corridors and local roads that, though carrying smaller total volumes of trucks, are still vital to the region's goods movement. East-West corridors throughout the SJV (including SR 152, SR 58, SR 198 and SR 46) are especially important, as are numerous smaller facilities (such as farm to market roads and County roadways) that connect single industrial sites, farms, agricultural processing centers, or other freight-generating activities to the Statewide and National freight system. It is crucial that all of these corridors are maintained at a level where the safe, efficient movement of goods is possible.

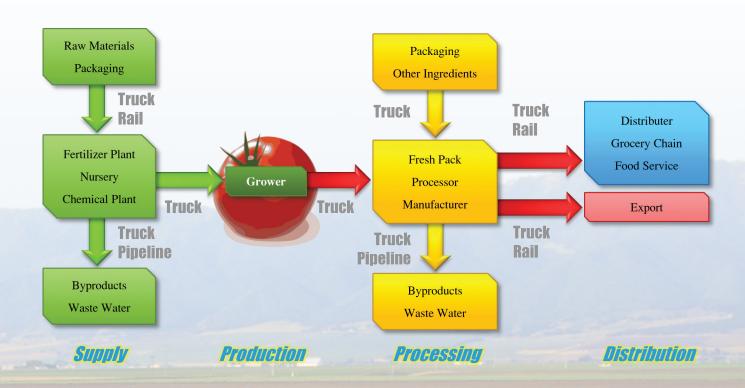

Issue #2: Lack of Transportation Modal Choices. Goods Movement in the San Joaquin Valley is currently dominated by a single transportation mode – trucking. In 2007, of the 500 million tons of goods that moved into, out of, or within the region, more than 90% moved by truck. There are some good reasons for this, and trucks will always be a very important component to goods movement in the San Joaquin Valley (SJV). However, it is important to continue to study the potential of expanding other modes in the region – including short line rail, improved access to Class I rail, and increased use of air cargo.

Source: National Transportation Atlas Database, Caltrans

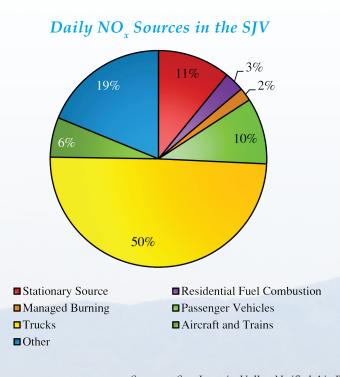

In addition, the dependence on one mode could increase the supply chain costs of certain industries. Some industries, such as the tomato processing industry, use alternate modes such as rail for various stages of their supply chains. Maintaining the safety, usability, and efficiency of these modes is important to the economic health of these industries, and the region as a whole.

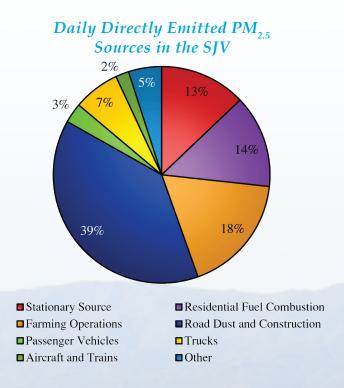

Issue #3. Environmental and Community Impacts of Goods Movement. Goods movement in the San Joaquin Valley results in several types of environmental and safety impacts to communities. Movement of trucks, trains, and airplanes all contribute to the Region's air pollution problems, as well as the associated impacts to public health and the environment. In addition, safety concerns exist around at-grade rail crossings, as well as along some corridors not designed to safely carry high truck traffic, and places where truck parking shortages lead to illegally parked trucks. In 2010 (the most current data available) there were 752 truck-involved crashes recorded in the San Joaquin Valley. The sources of these accidents vary, and can include poor weather, driver fatigue, or lack of awareness of trucks by other roadway users. Finally, goods movement can lead to incompatible land uses – residents near distribution centers, rail yards, and other goods movement facilities can be impacted by light and noise pollution, as well as from runoff pollution to regional drinking water. In some cases, expanding urban/residential areas can move incompatible land uses into close contact, causing conflicts between residents and the goods movement facilities.

According the San Joaquin Valley Air Pollution Control District (SJV APCD), emissions from trucks, trains, and aircraft account for about 9 percent of daily PM2.5 and about 50 percent of daily NOx in the Valley. Freight activities are not a major source of carbon monoxide (CO) pollution, and contribute a relatively small portion of the total sulfur dioxide (SO₂) and lead (Pb) to the atmosphere. For example, trucks were responsible for 4% of total SO2 San Joaquin Valley emissions in 2012.

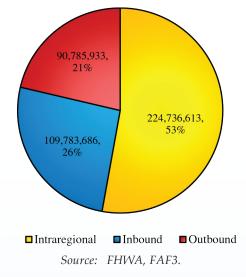

Source: San Joaquin Valley Unified Air Pollution Control District 2012 PM2.5 Plan.

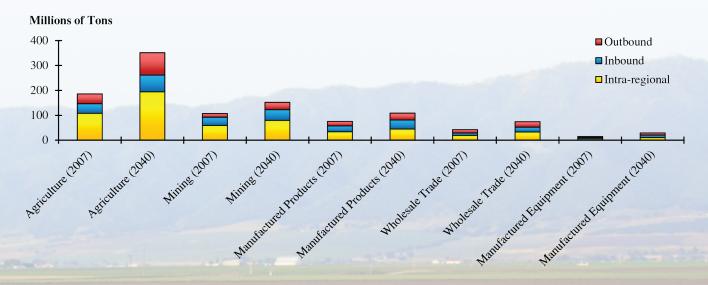

Issue #4. Maintain and improve connections to international markets. Many of the SJV's agricultural and manufacturing products utilize the Port of Oakland, LA / Long Beach, and Stockton to access to national and international markets. This connectivity is essential to the livelihood of the SJV, and should be preserved. In addition, as industries within the San Joaquin Valley strive to move up the value chain in agricultural production, these links to domestic and international markets will become even more crucial. Institutional support for marketing SJV products include California's International Trade Coordinating Council, California Enterprise Zones, and Free Trade Zones established at several locations throughout the SJV.

Issue #5: The Importance of East-West Corridors and "Last Mile" facilities. Many of the SJV's east-west corridors (SR-152, SR-58, SR-120 and others) are outdated and require updating to keep pace with traffic volumes. This has important implications for goods movement, since 53% of all commodities moving into, out of, or within the region are "interregional". This means that 53% of all commodities are moving from one location in the SJV to another location in the SJV, often using the critical E-W corridor linkages.

Last Mile" connectivity. Many of the SJV's agriculture and industrial facilities are located in rural regions, dispersed throughout the entire SJV. These industries rely heavily on intraregional trucking for their day-to-day business activities. This means that trucks associated with agriculture and industrial activities rely on many different types of

roads, including smaller local roadways connecting rural farms and industrial plants that are not designed to carry heavy vehicle traffic. This creates issues of "last mile" connectivity, where roads to individual sites are under-maintained, capacity constrained, or unsafe. Some stakeholders report that companies have chosen to locate elsewhere because of this lack of intraregional transportation system connectivity.

Issue #6. Build a transportation system to encourage economic development. San Joaquin Valley stakeholders have expressed interest in diversifying and building the Valley's economy in several new directions, including:

- Higher- value crops including tree nuts (almonds, pistachios, walnuts)
- · Logistics and warehousing/distribution
- Light manufacturing (including biotech, alternative energy, packaging materials)
- Oil production
- Products for the export market, especially specialty agricultural products

Transportation system investments, to the extent possible, should support these economic development trends, and recognize likely demographic shifts in the SJV that may help to predict industry growth or decline.

Other issues discussed throughout this San Joaquin Valley Interregional Goods Movement Plan.

Truck Parking Shortages. Truck parking shortages can result in illegal truck parking, sometimes located on residential streets and next to goods movement facilities. Illegally parked trucks can be a safety hazard, as well as contribute to noise and localized emissions. As a state, California ranks first in the nation in overall (private and public) commercial vehicle parking shortage. Recent truck parking estimates indicate that demand exceeds capacity at all public rest areas and at 88 percent of private truck stops on the State's highest-volume corridors (including I-5).

Pavement Wear and Tear. On average, one fully-loaded 80,000 pound truck causes as much pavement wear as up to 10,000 automobiles. This can contribute to the deterioration of roadway surfaces, in particular when trucks are using smaller connector facilities that are not intended for heavy truck usage (which is extremely prevalent in the SJV). Deterioration of roadway surfaces is a problem for truck owners/operators and the public sector alike.

Short line Rail Capacity. There have been several occasions of short line rail abandonments or plans to discontinue service on parts of their system. In addition, car supply can be a perennial problem for customers that do not ship often or that ship in peak periods when the car supply is tight.

Port Access Concerns. Including the concern that limited rail capacity at the Port of Stockton may soon be exceeded. Ensuring access to the Port of Oakland is also of utmost priority, since it serves as the primary export port for the SJV. Several major industries in the SJV depend heavily on this link to reach international markets.

Underutilized Airport Capacity. The SJV has available, underutilized assets in the form of eight regional air cargo facilities.

SJV Goods Movement Priority Project List

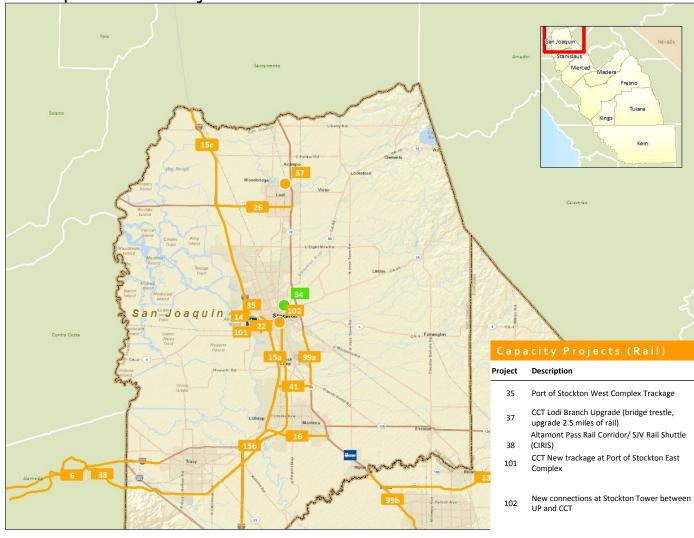

In order to address the identified goods movement issues, the SJV Goods Movement study identified 48 priority projects. These include projects on the highway system, local and connector road system, short line rail system, and projects that support the development of an inland port facility in the SJV. In addition, long-term environmental and economic development strategies and projects are included. The list is organized into seven project types.

- 1. **Regional North-South Highway Capacity:** Conventional capacity increases through widening, interchange improvements, and new construction.
- **2. East-West Connectors:** Conventional capacity increases through widening, interchange improvements, and new construction.
- 3. Local "Last Mile" Connectors: Conventional capacity increases through widening, interchange improvements, and new construction.
- **4. Modal Capacity for Expected Flows:** Rail and highway capacity increases to accommodate specific expected increases in existing freight flows
- **5. Contingent Economic Development Opportunities:** Rail and air cargo capacity increases or upgrades to support new or hoped-for freight flows.
- **6. Inland Ports:** Goods movement and economic development initiatives requiring both capital investment and operating subsidies.
- 7. **Strategic Programs:** Regional strategies encompassing multiple projects, including those focused on long-term sustainability and energy efficiency.

It is anticipated that this project list will be forwarded into statewide and national planning efforts, including the Caltrans Freight Mobility Plan and efforts that arise out of the Federal MAP-21 process.

The 49 projects are displayed on 7 regional maps on the following pages.

Funding Recommendations for Goods Movement Projects

There are recognized shortfalls in the availability of many of the Federal and state sources for practical use in funding goods movement projects. For example, TIGER grants are extremely competitive- and in fact only about 5% of total applicants eventually receive an award. Likewise, the FHWA's Section 130 grants for grade crossing improvements are capped at \$220 million dollars annually – money that is distributed among all 50 states (and thousands of potential grade crossing improvement projects). New sources of revenue- including the California Cap-and-Trade program – may take years before they become a fully capitalized, ongoing source of funding for goods movement projects. Therefore, like many other regions across the nation, the San Joaquin Valley must be proactive in searching and advocating for new sources of funding. In addition, SJV stakeholders can continue to build the right alliances to make sure that SJV projects have broad support from numerous stakeholders, as well as clearly demonstrated regional benefits. Several other funding recommendations are included on the following pages.

Recommendation #1 - Prepare for MAP-21 Actions

The region can work to strengthen the National Freight Policy and National Freight Network provisions to identify ways that the federal government, in partnership with the states and regions, will invest in and maintain the national freight network.

Provision	Action
Establishes National Freight Policy	Establishes a national freight policy, including establishing goals
	for national investment into freight infrastructure.
National Freight Strategic Plan	Calls for development of a National Freight Strategic Plan, that
	would assess the condition and performance of the national freight
	highway network. This requires the USDOT to identify highway
	bottlenecks, issues, and major trade corridors.
State Freight Advisory Committee and	Encourages states to establish freight advisory committees, and
State Freight Plans	develop state freight plans.
National Freight Network	Calls for the establishment of a National Freight Network. This
	network would consist of a primary network established by the
	FHWA, but also portions of the interstate system and critical rural
	freight corridors.

These new provisions suggest several opportunities for the San Joaquin Valley. For instance, the inclusion of critical rural freight corridors in the National Freight Network may be an opportunity for the SJV to gain national recognition for several of its critical rural corridors. It is likely that corridors will be selected for their importance to national commodity flows, and the national economic significance of these flows. Work completed throughout this SJV Interregional Goods Movement Plan lays the groundwork for the region to demonstrate the regional and national importance of several of its goods movement corridors, and may be a head start to getting National Freight Network designation.

Funding Recommendations for Goods Movement Projects (continued)

Recommendation #2 - Advocate for a Series of Short Line Rail Programs at the Regional and State Level

The Stakeholder outreach efforts completed during this San Joaquin Valley Goods Movement Study reveal strong support for short line rail systems. Stakeholders recognize that short line rail could, potentially, remove thousands of trucks from the region's highway system. This could bring benefits such as decreased congestion, decreased wear and tear on regional roads, reduced truck emissions, and reduced truck safety concerns. In response to this desire, the following recommendations were developed regarding potential policies and funding programs to support short line rail. Most of these programs would be state or federal-level programs. Therefore, the role of SJV stakeholders is mostly to advocate for these programs, or to offer potential pilot projects for the demonstration of the efficacy of any of these programs.

Potential Program		Program Summary
Freight Rail Assistance Program	•	Grant or loan source at the state level to support short line rail maintenance or capacity projects
	•	More than 30 states have such a program
Industrial Rail Access Program (IRAP)	•	Provide grants and loans for build-out to rail-served industries
	•	Facilitate development of transload and intermodal terminals in agri-
		cultural regions
Create Performance Goals for Short Line Rail	•	Create performance targets for short line rail

- Numerous states across the nation have adopted freight rail assistance programs designed to address short line rail needs, to recognize the important role that rail has in job creation and economic development, and, in some cases, to formalize the state's participation in funding rail projects. More than 30 states have some kind of freight rail assistance program in place, including Kansas, Oregon, Wisconsin, Iowa, and Indiana. However, California is not one of these states. Though this type of program would be a state-level program, SJV stakeholders can advocate for the development of such a program.
- The development of an Industrial Rail Access Program (IRAP) could help to maintain the competitiveness of California's freight intensive industries. The program would focus on providing grants and loans to accomplish build-out to rail-served industries. It could also be used to facilitate the development of transload and intermodal terminals in agricultural regions. This program could be complemented with other actions at the state level, including a streamlined approval and permitting process for qualifying facilities, and the support of investments to provide sufficient main line capacity for handling industrial traffic generated by the new facilities.
- The development of short line performance metrics could help to better understand and quantify system
 needs throughout the SJV. Being able to quantify the costs of meeting these performance metrics would
 establish a baseline assessment of regional short line rail "needs". This would also help to position the region
 for successful grant applications for TIGER, or other competitive grant sources (for example if a California
 freight rail assistance program were to be established).

Funding Recommendations for Goods Movement Projects (continued)

Recommendation #3 - Other Potential Actions

Coordination with Other Plans

One of the needs highlighted by stakeholders in the public outreach process is the need for coordination between different transportation and goods movement planning efforts at the state and regional levels. Stakeholders expressed concern for a unified and consistent goods movement "vision", that is carried through all regional and state transportation planning efforts. Because of this concern, this plan coordinated closely with the California Statewide Rail Plan, the SR-99 Business Plan, and other ongoing studies. This is a concept of growing importance, in particular, when considering the opportunities presented by MAP-21.

Agency and Stakeholder Collaboration

Ongoing interregional collaboration can bring about reduced costs of service, improved service and better economic competitiveness for the region. This type of coordination is already occurring- for example this San Joaquin Valley Goods Movement Plan represents the combined goods movement planning efforts of all eight counties within the San Joaquin Valley. Likewise, other efforts of the San Joaquin Valley Regional Planning Agencies Policy Council has created a strong venue for collaborative, multiagency planning. This type of multiagency coordination has been successful in procuring Federal funds in the past—in particular, through competitive, nationwide programs, such as the TIGER grants in 2010, 2011, and 2012.

The San Joaquin Valley

Interregional Goods Movement Plan Appendix A:

— Additional— Recommendations

SJV Goods Movement Priority Projects: Air Quality Recommendations

The serious air pollution problems in the SJV require application of emission control measures and implementation of these measures depends critically on coordination between transportation planning agencies and environmental agencies. Air quality in the San Joaquin Valley is regulated by several agencies; each exercising varying levels of control. The Federal government, acts primarily through the EPA, State government, acts through the California Air Resources Board (ARB) and Bureau of Automotive Repair, and the local air pollution control districts, the SJV Air Pollution Control District (APCD), develops plans and implements control measures.

Many strategies are available to reduce emissions from the freight sector ranging from technology applications to infrastructure improvement projects, and from operations strategies to institutional and regulatory initiatives. Some of the strategies are shown below.

Technology Strategies	Anti-Idling Strategies	Energy Efficiency Strategies	Alternative Fuel Strategies
Retrofit older engines with Truck Stop		Truck Speed Reduction	Ultra Low Sulfur Diesel
diesel particulate filters or	Electrification		(ULSD) fuel
diesel oxidation catalysts			
Replace old engines with	Auxiliary Power Units	Hybrid-Electric Vehicles	Compressed Natural Gas
brand new engines			(CNG)
Retrofit older engines with	Anti-Idling Regulations	Improved Vehicle	Liquefied Petroleum Gas
selective catalytic reduction		Aerodynamics	(LPG)
(SCR) systems			
Retrofit older engines with	Locomotive Idling	Improved Tire	Emulsified Diesel Fuel
selective catalytic reduction	Limit Devices	Efficiency	
(SCR) systems			
Convert engine to run on		Vehicle Weight	Biodiesel Fuel
alternative fuels or electricity		Reduction	11/2

SJV Goods Movement Priority Projects: Safety Recommendations

The movement of goods can have safety implications. For example, in 2010 there were 752 truck-involved crashes recorded in the SJV. Contributing factors can include poor driver performance, driver fatigue, and a lack of awareness of trucks by other roadway users. Other contributing factors are the unsafe condition of truck tires, poor weather conditions, or malfunctions of braking systems and steering systems. The mixing of rail and truck traffic at at-grade rail crossings can be a source of traffic- and safety-related concern. In 2011, the eight-county SJV had a total of 35 incidents at highway-rail grade crossings, including 31 train/vehicle incidents, and 4 incidents that involved pedestrians

Improving freight transport safety in the SJV requires the region's jurisdictions to collabo-

rate with each other and with regional, state, and Federal agencies in the areas of engineering (infrastructure), education, enforcement, and operations.

- Engineering Strategies. Freight vehicle crashes can be reduced through implementation of improved roadway and rail crossing designs. Improving roadway infrastructure with respect to safety benefits freight and non-freight users alike.
- Education Strategies. Providing safety education to commercial vehicle operators helps ensure drivers
 are aware of and follow safe practices. Because truck-involved crashes often occur with passenger vehicles, it is also important to provide education to the driving public on how to safety drive in the presence
 of large trucks.
- Enforcement Strategies. Effective commercial vehicle enforcement programs help reduce truck-involved
 crashes, protect highways and bridges from unnecessary damage from overweight vehicles, and ensure hazardous materials are transported safely.
- Operations and Management Strategies. Operations and management strategies can be designed to
 help truck drivers operate safety by providing wayfaring information and additional facilities for drivers to pull over and rest. Some of these strategies (such as the availability of truck parking facilities)
 have been identified throughout this project as key issues facing the safety and efficiency of the region's
 transportation system.

SJV Goods Movement Priority Projects: Land Use Recommendations

Goods movement and freight facilities can affect land use. Even with the best mitigations, freight operations tend to create noise, traffic, and emissions. Uncoordinated land use planning that allows residential development adjacent to busy industry or freight facilities will likely lead to encroachment, disproportionate adverse impacts, and conflicts. If providing greater goods movement capacity requires expansion within existing rights-of-way that are immediately adjacent to residential or commercial uses or if there expansion beyond existing rights-of-way is necessary, this will be done more effectively if current land use plans acknowledge the potential conflicts. Protecting right-of-way in strategic goods movement corridors is an important element in land use planning that is often overlooked.

The land use strategies presented in the plan can help to better integrate freight into the land use planning process. Some strategies are to be implemented by the private sector, to help minimize the negative impacts of their necessary freight movement activities. Other strategies are to be implemented by the public sector, to ensure that land use design and planning recognizes freights needs and helps to plan for it. Implementing these concepts through combined action of public and private sector stakeholders can help to maximize the benefits of goods movement, while minimizing the negative impacts to communities and the environment.

These strategies can be classified into the following three types:

- Land Use and Transportation Coordination Tools. These tools focus on the recognition that land use and
 freight planning activities should be more closely coordinated. Doing so can help ensure that freight land
 uses have the space that they need to operate safely and efficiently. Conversely, better integration can ensure
 that freight land uses minimize their negative impacts on communities within which they locate and move
 through.
- Operational and Educational Tools. These tools focus on methods to streamline goods movement activities to increase the efficiency and safety of freight movement, or freight cargo pick-up or drop-off activities.
 Educational components (to the public and to freight system stakeholders) are also included in this category.
- Transportation System Tools. These tools focus on ensuring that transportation system design and operation
 minimizes potential negative impacts on local communities and the environment. They include strategies
 to mitigate safety, congestion, emissions, and other types of public nuisance (i.e., noise or lighting) from
 transportation system operations.

The details of these potential strategies are presented in the technical memorandum for Task 8 of the SJV Interregional Goods Movement Study.

Interregional Goods Movement Plan Appendix B:

Federal and State Funding Sources

Federal Funding Sources for Goods Movement Projects

Congress reauthorized the Federal surface transportation programs in July 2012. The legislation – MAP-21 – maintains current Federal transportation funding levels (adjusted for inflation) for the Federal fiscal years 2013 and 2014. Based on these authorization levels it is likely that California will continue to receive Federal transportation funds for the next several or more years at levels consistent with what has been received under the previous transportation bills. In this funding climate and with continuing Congressional concerns about growth in the Federal deficit, MAP-21 did little to create new funding opportunities for freight transportation programs in the short-term. The longer-term outlook for Federal transportation funding is less clear, but Congress laid the groundwork in MAP-21 for what might eventually become a national freight program.

Despite MAP-21, funding sources at the Federal level remain slim. There are special and discretionary grants are monies set aside from the Federal Highway Trust Fund (and general revenue) by Congress for specific purposes. These grants can be awarded to state and local governments on a competitive basis or at discretion of the Secretary of Transportation. Examples are Projects of National and Regional Significance program and TIGER grant programs, both of which funded projects that improved freight movement within and between modes.

Though these grant programs are very competitive (for example only 5% of TIGER applications are successful, work completed in this plan may help to favorably position the region to be competitive. The U.S. DOT has moved to greater reliance on benefit-cost methodologies for selecting projects and the benefits evaluations contained in the SJV Inter-Regional Goods Movement Study should provide much of the basic information necessary to compile competitive grant applications.

Funding Source	Description
TIGER	The Transportation Investment Generating Economic Recovery (TIGER) Discretionary Grant
	program provides funds for road, rail, transit, and port projects. There have been five funding
	cycles to date, from 2009-2013. Total amount distributed in each funding cycle is between
	\$473 million and \$1.5 billion.
TIFIA	TIFIA provides Federal credit assistance to nationally or regionally significant surface trans-
	portation projects, including highway, transit and rail projects. The program is a low-cost
	debt program (borrowing tool) that may be accessed by the private sector (and in some cases
	the public sector). This can help to decrease the overall financing costs of the program. MAP-
	21 increased the funding for TIFIA to \$750 million for FY 2013.
FRA Grant Programs	Though none of these programs are currently (as of Spring 2013) accepting new applications,
	the FRA has in the past offered several grant programs to support freight rail safety and
	maintenance. These include the Railroad Safety Technology Grant Program, the Rail Line
	Relocations and Improvement Capital Grant Program, and the Disaster Assistance program.
Projects of National and	MAP-21 continued this program from SAFETEA-LU as a discretionary grant program.
Regional Significance	Eligible projects now include certain freight rail, port, and intermodal freight transfer facili-
Program	ties. Funded at \$500 million in FY 2013.

State Funding Sources for Goods Movement Projects

There are several California-specific programs available to help fund transportation projects. These programs are summarized below.

Funding Source	Description
State Transportation	The State Transportation Improvement Program (STIP) is the five-year plan adopted by the
Improvement Program	Commission for allocations of certain state transportation funds. Some of the sources for this
	fund include GARVEE bond proceeds, state gasoline and diesel fuel taxes, and reimburse-
	ments from the Federal Trust Fund for Federal Aid projects.
Interregional	The ITIP includes projects funded from the interregional program share of STIP funding. This
Transportation	represents 25% of new STIP funding. Projects are nominated by Caltrans in consultation with
Improvement Program	regional and local transportation authorities. Because of the inherently interregional nature
(ITIP)	of many freight projects, the SJV COGs may wish to advocate for a set-aside of some fraction
	of the funding to be reserved for freight projects with interregional significance. A number
	of the highway projects that cross county boundaries and even some of the connector projects
	that link to significant freight activity centers could be eligible for these funds.
Cap-and-Trade Program	State legislation, AB 32 (Nunez 2006) mandates a reduction of statewide GHG emissions to
Funds	1990 levels by 2020. In accordance with that law, California has implemented a market-based,
	cap-and-trade program. Funds from the program can be used to further the purposes of
	AB 32. However, at this point the funding for the program is extremely limited.
State Section 190 Grade	The Section 190 Grade Separation Program is a state-funded safety program that provides for
Separation Program	the elimination of existing at-grade railroad crossings.
Infrastructure Financing	California cities and counties have had authority since 1990 to create infrastructure financing
Districts	districts (IFDs) to fund local infrastructure improvements. IFDs can divert an incremental
	portion of property tax revenues for 30 years to fund improvements including highways and
	transit projects. IFDs have been used very sparingly probably because of the cumbersome
	process for formation and the fact that redevelopment agencies were also authorized to divert
	incremental property tax revenues.
eCommerce Tax	California law requires that residents pay a tax on the purchase amount of goods and services
revenues	when their order is placed over the internet. The ecommerce tax rate is equal to the sales tax
	rate. The State estimates that this law will result in an additional \$260 million in revenue for
	FY 2013. Currently there is no guarantee that these tax proceeds will be dedicated to transpor-
	tation purposes.
Warehouse Business-Tax	It may be appropriate to levy a business tax on warehousing, distribution and logistics firms
Revenues	that benefit from the faster and more reliable truck travel times provided by the EWFC/I-15
	project. In California, a business tax can be levied on all businesses in a similar trade, subject
	to two-thirds voter approval by the city, county or special district electorate
Public Private	PPPs appear to be a viable means of facilitating project-specific funding, thereby reducing the
Partnerships	pressure on other funding mechanisms. The major value of PPPs is not in providing capital
	that would otherwise be inaccessible, but in facilitating more rapid capital investment at a
	comparable or even lower financing cost.
